

PBI reports

– UX standards + UI theme

Unlocking data potential for business outcomes

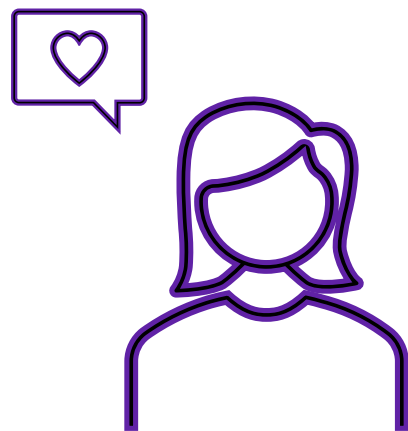

GE HealthCare

OneView

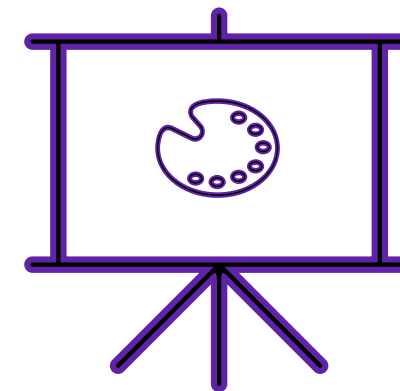

What is the aim of the Visualization standards?

Standardizing & unifying layouts of the reports in Power BI in GEHC **for better user experience**

Recommending best practices in information visualization to **help make the message clear**

Delivering themes & typical layouts for re-use in Power BI for **easier & faster development**

Basic palette

#6022A6	- Stripe in the top of the report pages - Interactive elements: buttons & links
#F2F2F2	- Pages background - Can be also used as charts background
#D4D4D4	Table columns headers
#FFFFFF	Default charts & tables background
#EEEEEE	Additional tables background

Sentiment colors

#FE90A2	NEGATIVE - if used as background
#CC0032	NEGATIVE – if text on white background
#BFD7C7	POSITIVE - if used as background
#5FBA4B	POSITIVE – if text on white background
#FFEEAF	CAUTION - if used as background

#FFEC54 CAUTION - if text on white background

Charts colors

! High level of accessibility for color blind due to Viz Palette tester*

Detailed application of colors as [described here ->](#)

#00005F	Indigo
#176782	Teal
#45B2C5	Turquoise
#8F7801	Old gold
#F8D754	Yellow
#19BB7C	Green
#868583	Dark gray
#D4D4D4	Cool gray 1

Text in visualizations

Page title stripe:

- **Dashboard / page title:** Calibri 20-24, #ffffff (white), on Compassion purple stripe
- **Subtitle / extra comment:** Calibri 10-12, #ffffff (white), on Compassion purple stripe
- **Last refresh metadata:** Calibri 12, #ffffff (white), on Compassion purple stripe

Slicers:

- **Slicer title:** Calibri 10-14, #000000 (black)
- **Slicer values:** Calibri or DIN 10-12 (not bigger than title), #000000 (black)

Charts & other visualizations:

- **Visualization title:** Calibri 12 – 18 (based on the size of the visualization), #000000 (black)
- **Visualization subtitles or descriptions:** Calibri 10, #7F7F7F (dark grey)
- **Values:**
 - for visualizations with **1 value**: Calibri or DIN 20 – 28 (based on the viz size), pick dark colors from the palette
 - For visualizations with **multiple values** (typical charts): Calibri or DIN, 10 – 16 (based on the chart's size), #000000 (black)
- **Axis values in charts:**
 - **Y axis:** Calibri 8-12 (based on the chart's size), #8d8d8d (dark grey)
 - **X axis:** Calibri 9-13 (based on the chart's size), #000000 (black)

General layout

- Keep tables **as simple as possible** to make them easier to consume
- Rows **background**:
 - white OR
 - white and light grey (#EEEEEE) – 2 colors should be applied in such a way to help navigate between changing entities of analysis (if there is more levels of data in a row, apply grey to subtotals)
- **Text**: black (#000000), Calibri, min. 9, preferred 11+
- **No gridlines** (they might be optionally introduced as delimitations, ex. between some groups of values, between the main part of the table and headers, etc. In this case use one of the colors used for charts)

Table's headers

- **Text**: bold, black (#000000), Calibri, min. 9, preferred 11+
- **Background**: grey (#D4D4D4), preferably with a teal (#176782) line between the header and the first row with values

Values:

- **Text**: Calibri or DIN, min. 9, preferred 11+ (not bigger than in headers), by default not bolded (might be bolded in specific circumstances, ex. for highlight, sub-totals, etc)
- **The total values** should be bolded
- **Introduce sentiment colors to highlight what is important.** If you use sentiment colors, they can be accompanied by some icon or circle in the same color.

Sample layout

Top panel can be 56 - 72 px high + page-wide
Font: Calibri 20-28

This is the panel for your slicers.

If there is not many slicer values, try keeping all of them visible.

If there is many values in the slicer, add a search window to it

If you need to, you can make this pane wider

If the number of slicers/ filters needed is high, use the built-in Power BI filter panel. Give it a purple background + set it up as by default visible for users.

For no-scroll layout use canvas 16x9
(1280x720px or up to +35%)

The curve of the of the rectangle corners = 4 or less

Please keep **at least 4px padding** in visualizations

Align the texts **to the left** (exception can be made for callout values)

Please make **distances between the visualizations' borders** 4/8/12/16/20 etc. px (8/16/24 preferred).

Fancy a table?

Region	Value 1	Highlight it like this...	...or this...	...or like this
USCAN	123	(1.4%)	(1.4%)	● (1.4%)
China	123	2.3%	2.3%	● 2.3%
International	123	0.5%	0.5%	● 0.5%

Use purple for interaction only

Then it's impactful!

You can put many visualizations on the canvas but remember that **Less is more** from the user cognitive and PBI performance perspectives.

Try to **group information** in a meaningful manner, ex.:

- If some visualizations are connected, put them on 1 background rectangle
- If some slicers apply only to some visuals – group them and present the slicers just above etc.

Try to **avoid visual clutter** – ex. contrast outlines, unnecessary use of colors, too much text distract your user from the main message.

On the other hand, ex. **use of icons in strategic places may be useful.**
